Section 1 Introduction and Terms of Reference

This is the Non-Technical Summary of the Environmental Report for relevant Proposed Material Alterations to the Draft Sligo County Development Plan 2024-2030. The purpose of the Environmental Report is to provide a clear understanding of the likely environmental consequences of decisions regarding the Proposed Material Alterations. The Environmental Report has been prepared as part of a Strategic Environmental Assessment (SEA) process for the Proposed Material Alterations.

The Proposed Material Alterations were screened for the need to undertake SEA. Certain Proposed Material Alterations were determined as requiring full SEA. Appendix III to the SEA Environmental Report comprises the SEA Screening Report that considers the need for SEA.

This SEA Environmental Report provides the findings of the assessment and will be placed on public display alongside the Proposed Material Alterations. The Elected Members will be required to take account of this document, the Proposed Material Alterations and any submissions received on these after public display. The SEA is being undertaken in order to comply with Section 12 of the Planning and Development Act, as amended.

What is SEA?

SEA is a systematic process of predicting and evaluating the likely environmental effects of implementing a proposed plan, or other strategic action, in order to ensure that these effects are appropriately addressed at the earliest appropriate stage of decision-making on a par with economic, social and other considerations.

Why is SEA needed? The Benefits

SEA is the planning authority's and the public's guide to what are generally the best areas for development in the County.

SEA enables the planning authority to direct development towards robust, well-serviced and connected areas in the County – thereby facilitating the general avoidance of incompatible areas in the most sensitive, least well-serviced and least well-connected areas.

SEA provides greater certainty to the public and to developers. Plans are more likely to be adopted without delays or challenges and planning applications are more likely to be granted permission. Environmental mitigation is more likely to cost less.

An overlay of environmental sensitivities in County Sligo is shown on Figure 1.1.

The overlay mapping shows that environmental sensitivities are not evenly distributed throughout the County. Most of the County is identified as having low to moderate levels of sensitivity.

The most sensitive areas in the County include:

- Upland areas, such as Knocknarea, the Dartry Mountains and the Ox Mountains in the northern half of the County – on account of landscape designations, landslide susceptibility, ecological designations and groundwater vulnerability;
- Lakes throughout the County, including Lough Gara and Lough Arrow, on account of ecological and landscape designations, water status and flood risk;
- Certain locations and areas within the existing built-up footprint of the County's settlements, on account of cultural heritage designations, including entries to the Record of Monuments and Places, Entries to the Record of Protected Structures and Architectural Conservation Areas;
- Coastal areas and areas adjacent to rivers and streams, on account of ecological and visual sensitivities and elevated levels of flood risk; and
- Extensive areas of extreme and high groundwater vulnerability throughout the County.

Difficulties Encountered during the SEA process

No significant difficulties have been encountered during the undertaking of the assessment to date. There was limited water services information available for some settlements within the County however objectives requiring the provision of appropriate levels of water services alongside new development have been integrated into the Draft Plan.

There is a data gap relating to WFD surface water status data. There are a number of waterbodies within the Plan area with overall status currently not assigned to them and the term "unassigned status" applies in respect of these waterbodies. The SEA ensured that the Plan contains measures that will contribute towards the maintenance and improvement of status of all water bodies within the zone of influence.

What happens at the end of the process?

The SEA Environmental Report prepared for the Draft Plan will be finalised in advance of adoption of the Plan taking into account, among other things, the content of the SEA Environmental Report for the Proposed Material Alterations to which this Non-Technical Summary relates. An SEA Statement will also be prepared which will summarise, inter alia, how environmental considerations have been integrated into the Plan.

Section 2 The Draft Plan and associated Proposed Material Alterations

2.1 Introduction and Content

The Draft Sligo County Development Plan is a land use plan and overall strategy for the proper planning and sustainable development of the functional area of County Sligo over the six-year period 2024-2030. The Plan sets out the Council's proposed policies and objectives for the development of the County over the Plan period.

The Draft Plan provides for the proper planning and sustainable development of County Sligo over the period 2024-2030. The Plan has been structured in four volumes, with a number of appendices.

Volume 1 contains the sectoral strategies which, together, make up the Core Strategy of the Development Plan: Settlement, Housing, Economic, Retail and Transport Strategies. Climate Action is located at the forefront of the Plan, setting the framework for the Council's commitments and obligations under the Climate Action Plan.

Volume 2 provides the detailed compact growth designations, zoning and specific objectives for the 12 towns and villages where development will be promoted during the Plan period. Fewer objectives are included in relation to Sligo Town, for which a Local Area Plan must be prepared following the adoption of the Development Plan.

Volume 3 contains all the general policies and objectives designed to guide development in the County, thematically grouped in chapters such as Residential Development, Community and Social Infrastructure, Economic Development, Water infrastructure, Transport Infrastructure, Energy and Telecommunications etc. This volume also sets out the development management standards used by the Planning Authority in the assessment of planning applications.

Volume 4 includes specific objectives for the villages sustaining rural communities, where no significant population or housing growth is envisaged.

Among the documents that accompany the Development Plan, having informed its policies and objectives, the most significant are the Housing Strategy, the Draft Sligo Local Transport Plan and the Wine Street Car Park Master Plan.

2.2 Vision and Summary of Settlement Strategy

The Plan identifies the Vision for Sligo in 2030 from the "Sligo 2030: One voice, One vision – Local Economic & Community Plan 2023-2030";

"The Vision is for a smart, sustainable, and socially inclusive Sligo; one that cherishes its vibrant communities, protects and celebrates its unique environment and rich culture, and is a champion of innovative growth and development."

County Sligo's settlement structure and hierarchy have remained largely unaltered for many decades, due to the slow pace of economic and social changes, similar to the entire North-West Region, where development continues to lag behind the EU average.

The National Planning Framework/Regional Spatial and Economic Strategy designation of Sligo Town as a Regional Growth Centre recognises the Town's complex role in the North-West and places it at the top of the County's Settlement Hierarchy.

Consistent with the National Planning Framework and Regional Spatial and Economic Strategy for the North West, the Core Strategy will continue to focus on developing Sligo Town, while ensuring that the County's lower-tier towns and villages retain their vitality.

The settlement hierarchy and the strategy for each category are summarised below:

- Sligo Town is the County's main urban centre, which provides employment, education, healthcare and other services to people living in its large hinterland, within and beyond the County boundaries. It is the designated Regional Growth Centre of the North-West.
- In terms of size and social-economic role, the second level is occupied by three Support Towns. The market towns of Ballymote and Tobercurry and the tourism-focused Enniscrone are designated for consolidation, regeneration and a quantum of growth proportional to their current population and infrastructural capacity.
- Sligo Town's Satellite Villages - Ballysadare, Collooney, Coolaney, Grange and Strandhill – are home to large numbers of regular commuters who go to work or to school in the main urban centre. These larger villages have relatively good infrastructure and also offer a variety of local services.
- Easky, Mullaghmore and Rosses Point are villages with special coastal tourism functions (a role shared with Enniscrone and Strandhill). The Core Strategy supports the provision of adequate infrastructure for sustainable tourism development in these villages.
- At the lower end of the Settlement Hierarchy, 19 villages sustaining rural communities (small villages with adequate wastewater treatment plants) are supported through the Core Strategy to cater for limited local needs in terms of residential development.
- A substantial population continues to live in dispersed communities throughout the County's rural areas, including small villages without adequate wastewater treatment infrastructure.

2.3 Proposed Material Alterations

The Proposed Material Alterations are outlined in detail in the accompanying Proposed Material Alteration documents. The Alteration Numbers provided in this report can be used to locate this detail in the accompanying Proposed Material Alteration documents.

Alterations proposed include those relating to maps, including land use zoning, and text.

The Proposed Material Alterations were screened for the need to undertake SEA and the alterations below were determined as requiring full SEA. Appendix III to the SEA Environmental Report comprises the SEA Screening Report that considers the need for SEA. Proposed Material Alterations requiring SEA and consideration in the SEA Environmental Report are as follows¹:

Other Proposed Material Alterations are also addressed in the SEA Environmental Report, including within Appendix III.

2.4 Strategic work undertaken by the Council to ensure contribution towards environmental protection and sustainable development

Far in advance of both the submission of the Chief Executive's Draft Plan to the Elected Members for approval and the placing of the Draft Plan on public display, Sligo County Council undertook various research in order to inform the preparation of the Plan.

The findings of this strategic work have been integrated into the Plan and will contribute towards both environmental protection and management and sustainable development within the County.

Strategic work undertaken by the Council includes background work in relation to Plan Strategies and other provisions, including those relating to:

- Climate Action;
- Core Strategy;
- Sligo Growth Centre;
- Settlement Strategy;
- Housing Strategy;
- Economic Strategy;
- Retail Strategy; and
- Transport Strategy.

The undertaking of this SEA process and the associated AA and SFRA processes contributed towards the integration of environmental considerations into individual Plan provisions as summarised in Section 6 of this report.

2.5 Relationship with other relevant Plans and Programmes

It is acknowledged that many of the major issues affecting the County's development are contingent on national policy and government funding.

The Draft Plan, to which the Proposed Material Alterations relate, sits within a hierarchy of statutory documents setting out public policy for, among other things, land use planning, infrastructure, sustainable development, tourism, environmental protection and environmental management. The Plan must comply with relevant higher-level strategic actions and will, in turn, guide lower-level strategic actions. These documents include plans and programmes such as those detailed in Appendix of the main SEA

Environmental Report. These documents have been subject to their own environmental assessment processes, as relevant.

The National Planning Framework sets out Ireland's planning policy direction for the years 2018-2040. The National Planning Framework is to be implemented through Regional Spatial and Economic Strategies and lower tier Development Plans and Local Area Plans. The Regional Spatial and Economic Strategy for the Northern and Western Region sets out objectives for land use planning, tourism, infrastructure, sustainable development, environmental protection and environmental management that have been subject to environmental assessment and must be implemented through the County Development Plan.

As required by the Planning and Development Act 2000, as amended, the Draft County Development Plan is consistent with and conforms with national and regional policies, plans and programmes, including the National Planning Framework and the Regional Spatial and Economic Strategy for the Northern and Western Region. The County Development Plan will, in turn, guide lower-level strategic actions, such as Local Area Plans that will be subject to their own lower-tier environmental assessments.

In order to be realised, projects included in the County Development Plan (in a similar way to other projects from any other sector) will have to comply, as relevant, with various legislation, policies, plans and programmes (including requirements for lower-tier Appropriate Assessment, Environmental Impact Assessment and other licencing requirements as appropriate) that form the statutory decision-making and consent-granting framework.

Section 3 The Environmental Baseline

3.1 Introduction

The summary of the environmental baseline of the County is described in this section. This baseline together with the Strategic Environmental Objectives, which are identified in Section 3.11, is used in order to identify, describe and evaluate the likely significant environmental effects of implementing the Draft Plan, to which the Proposed Material Alterations relate, and in order to determine appropriate monitoring measures.

3.2 Likely Evolution of the Environment in the Absence of the Draft Plan and associated Material Alterations

The 2017 County Development Plan, as varied, has contributed towards environmental protection within County Sligo. If the 2017 Plan was to expire and not be replaced by the 2024-2030 Plan, this would result in a deterioration of the County's planning and environmental protection framework. Although higher level environmental protection objectives – such as those of various EU Directives and transposing Irish Regulations – would still apply, the deterioration of this framework would mean that new development would be less coordinated and controlled.

Such adverse effects could include:

- Arising from both construction and operation of development and associated infrastructure:
 - Loss of/damage to biodiversity in designated sites (including European Sites, Wildlife Sites and Areas of Special Scientific Interest) and Annexed habitats and species, listed species, ecological connectivity and non-designated habitats; and disturbance to biodiversity and flora and fauna;
 - Habitat loss, fragmentation and deterioration, including patch size and edge effects; and
 - Disturbance (e.g. due to noise and lighting along transport corridors) and displacement of protected species such as birds and bats.
- Potential interactions if effects arising from environmental vectors.
- Potential adverse effects on the hydrogeological and ecological function of the soil resource, including as a result of development on contaminated lands.
- Potential for riverbank and coastal erosion.
- Potential adverse effects upon the status of water bodies and entries to the WFD Register of Protected Areas (ecological and human value), arising from changes in quality, flow and/or morphology.
- Increase in flood risk and associated effects associated with flood events.
- Failure to provide adequate and appropriate waste water treatment (water services infrastructure and capacity ensures the mitigation of potential conflicts).
- Failure to adequately treat surface water run-off that is discharged to water bodies (water services infrastructure and capacity ensures the mitigation of potential conflicts).
- Failure to comply with drinking water regulations and serve new development with adequate drinking water (water services infrastructure and capacity ensures the mitigation of potential conflicts).
- Increases in waste levels.
- Potential impacts upon public assets and infrastructure.
- Interactions between agriculture and soil, water, biodiversity and human health – including phosphorous and nitrogen deposition as a result of agricultural activities and the production of secondary inorganic particulate matter.
- Risk of aggregate potential sterilisation.
- Potential conflict between development under the Plan and aiming to reduce carbon emissions in line with local, national and European environmental objectives.
- Potential conflicts between transport emissions, including those from cars, and air quality.
- Potential conflicts between increased frequency of noise emissions and protection of sensitive receptors.
- Potential conflicts with climate adaptation measures including those relating to flood risk management.

3.3 Biodiversity and Flora and Fauna

Information on biodiversity and flora and fauna that is relevant to project planning and development and associated environmental assessment and administrative consent of projects includes available information on designated ecological sites and protected species, ecological connectivity (including stepping stones and corridors) and non-designated habitats.

The most ecologically sensitive, heavily designated and protected areas within County Sligo include the coastal areas and marine waters, various rivers, streams and estuaries and associated aquatic ecology, peatlands and upland locations.

Designated sites within the County include Special Areas of Conservation² (SACs) and Special Protection Areas³ (SPAs). These are mapped on Figure 3.1. There are 31 European sites (20 SACs and 11 SPA) are designated within or partially within County Sligo. Other ecological designations occur within and adjacent to the County and these are detailed in the main SEA Environmental Report.

CORINE⁴ land cover mapping shows that the most dominant land cover types within the Plan area are pastures and agricultural lands. The most dominant land cover types are pastures and agricultural lands, with significant areas of peatland in the northern half of the County. Categories from CORINE mapping that may indicate areas with the potential for Annex I habitats include: non-irrigated arable land; pastures; complex cultivation patterns; land principally occupied by agriculture with significant areas of natural vegetation; broad-leaved forest; coniferous forest; mixed forest; natural grasslands; moors and heathland; transitional woodland-shrub; inland marshes; peat bogs; water courses; and water bodies.

Existing Problems

Ireland's Article 17 report on the Status of EU Protected Habitats and Species in Ireland (DCHG, 2019) identifies various Irish, EU-protected habitats and species to be of unfavourable status and many to be still declining, although it also identifies that a range of positive actions are underway. Categories for pressures and threats on Ireland's habitats and species identified by the report include: Agriculture; Forestry; Extraction of resources (minerals, peat, non-renewable energy resources); Energy production processes and related infrastructure development; Development and operation of transport systems; Development, construction and use of residential, commercial, industrial and recreational infrastructure and areas; Extraction and cultivation of biological living resources (other than agriculture and forestry); and Climate change.

Ireland's Article 12 Birds Directive Reports and the 6th National Report under the Convention of Biological Diversity identify similar issues.

The Plan includes measures to contribute towards the protection of biodiversity and flora and fauna and associated ecosystem services. Previous changes in land uses arising from human development have resulted in a loss of biodiversity and flora and fauna however, legislative objectives governing biodiversity and fauna were not identified as being conflicted with.

² SACs have been selected for protection under the European Council Directive on the conservation of natural habitats and of wild fauna and flora (92/43/EEC) due to their conservation value for habitats and species of importance in the European Union. The Habitats Directive seeks to establish Natura 2000, a network of protected areas throughout the EU. It is the responsibility of each member state to designate SACs to protect habitats and species, which, together with the SPAs designated under the 1979 Birds Directive, form Natura 2000.

³ SPAs have been selected for protection under the 1979 European Council Directive on the Conservation of Wild Birds (79/409/EEC) - referred to as the Birds Directive - due to their conservation value for birds of importance in the EU.

⁴ The CORINE (Coordinated Information on the Environment) land cover data series was devised as a means of compiling geo-spatial environmental information in a standardised and comparable manner. CORINE has become a key data source for informing environmental and planning policy on a national and European level. The main land cover type in Ireland is agricultural land including forestry, which accounts for two-thirds of the national landmass. Most of this is permanent grassland pastures. Peatlands and wetlands are the second most widespread land cover type, covering almost one-fifth of the country. While forested areas cover about one-tenth of the country. Despite rapid development in the past two decades, Ireland's landscape is predominantly rural and agricultural.

3.4 Population and Human Health

In the 2022 Census, the total population of County Sligo was identified as being of 70,198 persons, an increase in total population in the County by c. 7% (c. 4,663 persons) since the previous census⁵. The NPF Implementation Roadmap provides a transitional set of population projections to inform city and county development plans for the periods to 2026 and to 2031. The population growth projections for County Sligo indicate population growth up to 71,500 - 72,500 persons by 2026 and up to 74,000 - 75,500 persons by 2031.

Sligo Town is the County's main urban centre, which provides employment, education, healthcare and other services to people living in its large hinterland, within and beyond the County boundaries. It is the designated Regional Growth Centre of the North-West.

The Plan designates a hierarchy of the County's settlements as follows:

- Regional Growth Centre (Sligo Town);
- Support Towns (Ballymote, Tobercurry and Enniscrone);
- Satellite Villages (Ballysadare, Collooney, Coolaney, Grange and Strandhill);
- Villages with special coastal tourism functions (Easky, Mullaghmore and Rosses Point);
- Serviced villages sustaining rural communities (Aclare, Ballinacarrow, Ballinafad, Ballincar, Ballintogher, Bellaghy, Bunnanadden, Carney, Castlebaldwin, Cliffony, Cloonacool, Culfadda, Curry, Dromore West, Drumcliff, Geevagh, Gorteen, Monasteraden and Riverstown); and
- Unserviced villages and dispersed settlement in rural areas (Ballygawley, Banada, Ransboro, Rathcormac, Tourlestrane and rural areas).

The new population provided for in the Plan will interact with various environmental components. Potential interactions include:

- Increase in demand for wastewater treatment at the municipal level;
- Recreational and development pressure on habitats and landscapes;
- Increase in demand for water supply and associated potential impact of water abstraction from the rivers;
- Potential interactions in flood-sensitive areas; and
- Potential effects on water quality.

Existing Problems

There is historic and predictive evidence of flooding in various locations across the County.

The greatest health risk from radiation in Ireland is caused by radon. The presence of radon gas, a naturally occurring radioactive gas that originates from the decay of uranium in rocks and soils, occurs across the country. The number of homes within the County with radon levels above the reference level is within the normal range experienced in other locations across the country.

3.5 Soil

Surface water gleys⁶ (found throughout the County) are the most dominant soil type in County Sligo. Peat soils are found throughout County.

Geological Survey of Ireland coordinates the Irish Geological Heritage Programme, which seeks to identify and select sites of geological interest within each county across the country. The audit of County Geological Sites in County Sligo was completed in 2004 and identified 25 County Geological Sites. Concentrations of these designations can be found in coastal and upland areas of the County.

⁵ Draft Sligo County Development Plan 2024-2030

⁶ Surface water gleys and groundwater gleys are wetland soils with slowly permeable horizons resulting in seasonal waterlogging.
CAAS for Sligo County Council

3.6 Water

Since 2000, Water Management in the EU has been directed by the Water Framework Directive 2000/60/EC (WFD). The WFD requires that all Member States implement the necessary measures to prevent deterioration of the status of all waters - surface, ground, estuarine and coastal - and protect, enhance and restore all waters with the aim of achieving good status. All public bodies are required to coordinate their policies and operations so as to maintain the good status of water bodies which are currently unpolluted and improve polluted water bodies to good status.

The County is situated within the surface water catchments of: Erne⁷; Sligo Bay and Drowse⁸; Upper Shannon (26A⁹ and 26B¹⁰); and Moy and Killala Bay¹¹.

The main waterbodies in the County include: Lough Gill; Lough Arrow; Lough Talt; Lough Gara; Easky Lough; Templehouse Lake; Owenmore River; Unshin River; River Moy; and Easky River.

The WFD surface water status (2016-2021), for rivers, lakes, coastal and transitional waters within and surrounding the County is shown on Figure 3.2.

The WFD status of the rivers and lakes within the area to which the Plan relates is classified as *high*, *good* and *moderate* however, sections of rivers and streams (including: Bunnanaddan Stream; Cartonkillerdoe; Douglas, Sligo; Garavogue; Grange, Sligo; Owenmore, Sligo; Tubbercurry Stream; Tubbercurry; and Gill) are identified as being of *poor* status, while the Templehouse Lake is identified as *bad* due to unsatisfactory ecological/biological and/or physio-chemical status.

The status (2016-2021) of transitional and coastal waterbodies within and adjacent to the area to which the Plan relates ranges from *moderate* to *high* and *good*, including a number of *unassigned* waterbodies.

The WFD status (2016-2021) of groundwater underlying the entire County is identified as being of *good* status.

Certain areas across the County are at risk from flooding from sources including groundwater, pluvial¹², fluvial¹³ and coastal¹⁴.

Existing Problems

Subject to exemptions provided for by Article 4 of the WFD, based on available water data, certain surface and groundwater bodies will need improvement in order to comply with the objectives of the WFD.

The Draft Plan includes provisions that will contribute towards improvements in the status of waters.

There is historic and predictive evidence of elevated levels of flood risk from sources including coastal and fluvial at various locations across the County.

⁷ This catchment includes the area drained by the River Erne and all streams entering tidal water between Aughrus Point and Kildoney Point, County Donegal. This is a cross border catchment with a surface area of 4,415km², 2,512km² of which is located within Ireland (ROI).

⁸ This catchment includes all streams entering tidal water in Sligo Bay and between Lenadon Point and Aughrus Point, County Donegal. The catchment has a surface area of 1,866km². A small part of this catchment, 109km², is located within Northern Ireland.

⁹ This catchment covers an area of 604km² and is characterised by the Brefine upland areas including the karst area of the Geevagh Hills, location of the Arigna Coalfield, the karstic southern slopes of Cuilcagh Mountain and the western flanks of Slieve Anierin, which surround the lowland area containing the large source of the River Shannon (Shannon Pot) and Lough Allen.

¹⁰ This catchment covers an area of 674km² and is characterised by old red sandstone uplands running along the northern catchment boundary, the highest of which are the Curlew Mountains and karstified limestone lowlands in the southern half of the catchment.

¹¹ This catchment includes the area drained by the River Moy and all streams entering tidal water in Killala Bay between Benwee Head and Lenadon Point, County Sligo, draining a total area of 2,345km². The lowland parts of the catchment are underlain by various types of limestones while the upland areas from the Ox Mountains and Croaghmoyle are underlain by a band of igneous and metamorphic rocks. Much of the lowland area south of Lough Conn exhibits a drumlin topography. There are extensive sand and gravel aquifers lying between Swinford and Charlestown to as far south as Knock, to the east of Ballina and southwest of Crossmolina.

¹² Resulting from high intensity rainfall events where run-off volume exceeds capacity of surface water network.

¹³ Watercourse capacity is exceeded or the channel is blocked and excess water spills from the channel onto adjacent floodplains.

¹⁴ Resulting from higher sea levels than normal causing the sea to overflow onto land. Such flooding is influenced by high tide level, storm surges and wave action.

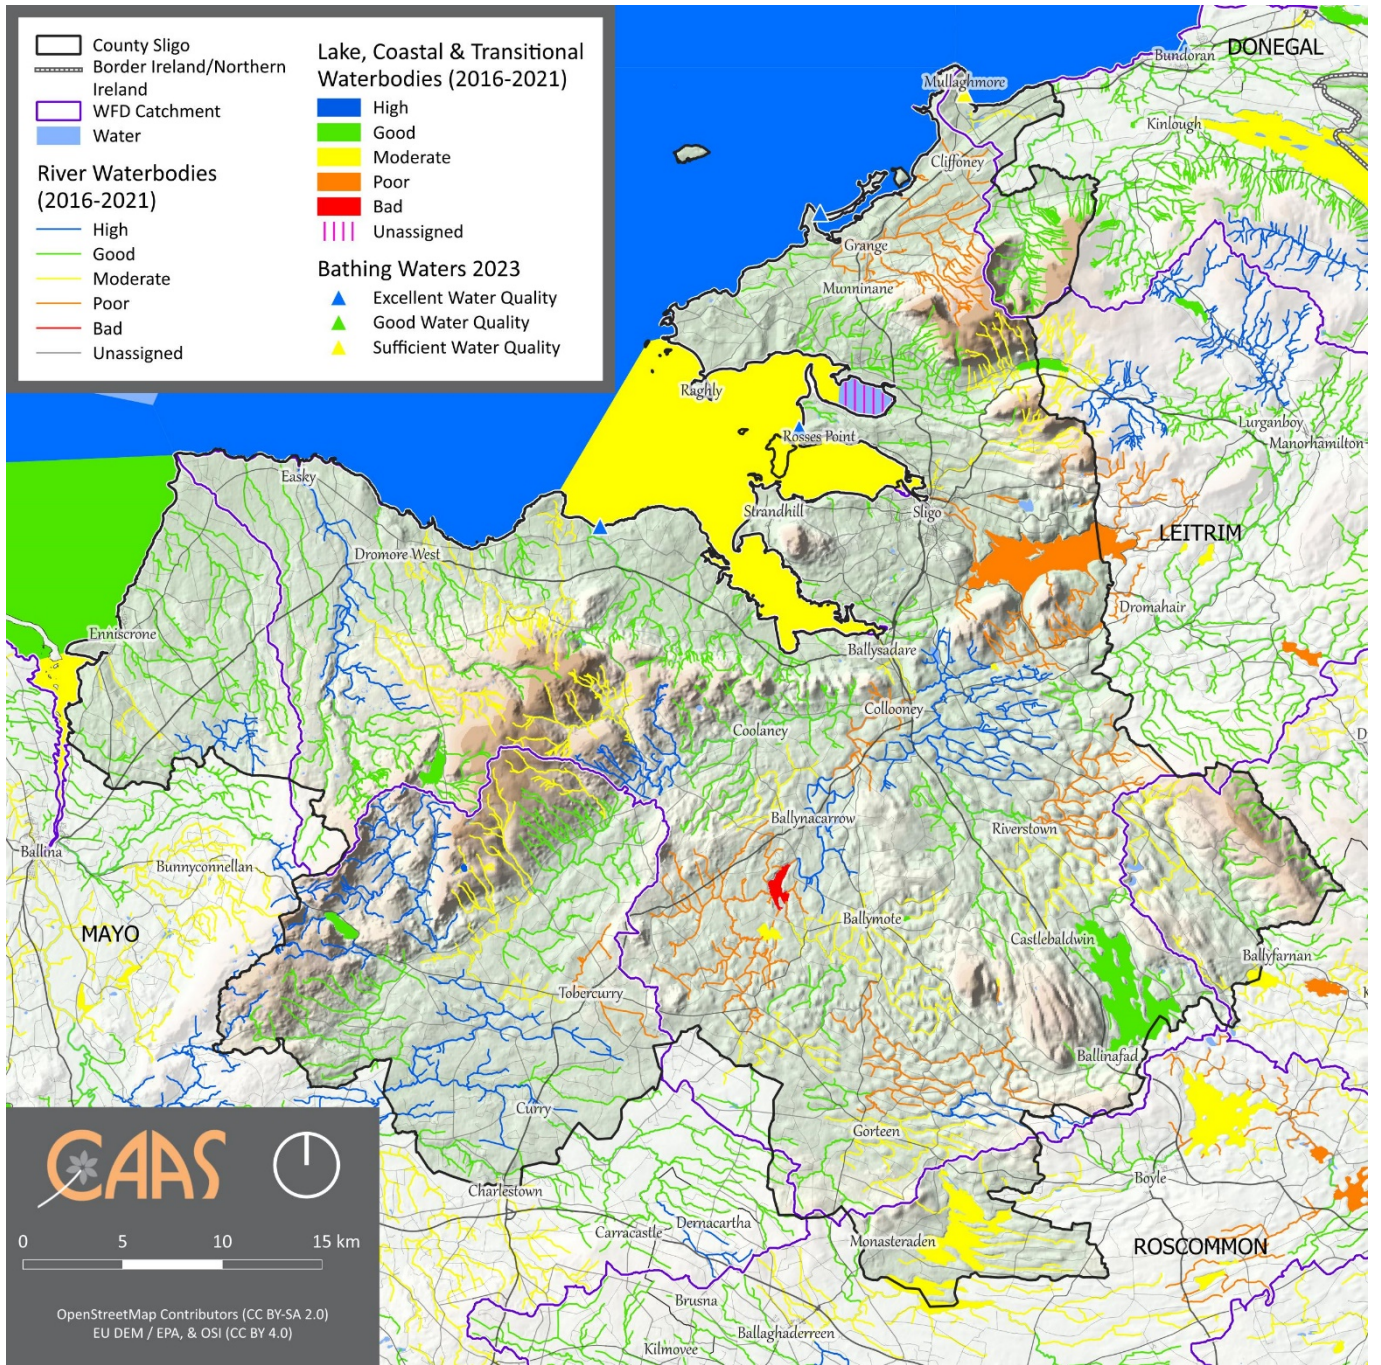

Figure 3.2 Surface Water Status (2016-2021)

3.7 Air and Climatic Factors

Climate mitigation describes the action to reduce the likelihood of climate change occurring or reduce the impact if it does occur. This can include reducing the causes of climate change (e.g. emissions of greenhouse gases) as well as reducing future risks associated with climate change.

The National Climate Action Plan 2024 (the third annual update to Ireland's Climate Action 2019) provides a detailed plan for taking decisive action to achieve a 51% reduction in overall greenhouse gas emissions by 2030 and setting Ireland on a path to reach net-zero emissions by no later than 2050, as committed to in the Programme for Government and set out in the Climate Act 2021. The Plan lists the actions needed to deliver on climate targets and sets indicative ranges of emissions reductions for each sector of the economy. It will be updated periodically, to ensure alignment with legally binding economy-wide carbon budgets and sectoral ceilings.

Climate adaptation is a change in natural or human systems in response to the impacts of climate change. These changes moderate harm or exploit beneficial opportunities and can be in response to actual or expected impacts.

The National Adaptation Framework Department of Communications, Climate Action and Environment, 2024), sets out the national strategy to reduce the vulnerability of the country to the negative effects of climate change and to avail of positive impacts. The National Adaptation Framework outlines a whole of government and society approach to climate adaptation. Under the Framework, a number of Government Departments will be required to prepare sectoral adaptation plans in relation to a priority area that they are responsible for.

Sligo County Council's first Climate Change Adaptation Strategy was prepared in 2019. The Strategy set out the Local Authority's strategic priorities, measures and responses for adaptation in County Sligo over the subsequent years, up to 2024.

The EPA's (2022) *Air Quality in Ireland 2021 Report* identifies that:

- Air quality in Ireland is generally good, however, there are localised issues.
- Ireland met all of its EU legal requirements in 2021 but it failed to meet the new WHO-based guideline levels for Health in 2021.
- Air quality monitoring results in 2021 showed that fine particulate matter (PM_{2.5}) mainly from burning solid fuel, and nitrogen dioxide (NO₂) mainly from road transport, remain the main threats to good air quality.
- It is estimated that there are approximately 1,300 premature deaths annually in Ireland due to poor air quality from fine particulate matter (PM₅).

Air pollution from transport is dominated by NO₂ emissions. Of these, NO₂ is particularly impactful from a health perspective. The report describes that concentrations of NO₂ at urban areas in Ireland are close to the EU annual limit value. The potential implications for air quality with increases in traffic numbers or from certain weather conditions unfavourable to dispersion of pollutants could result in exceedances of the EU limit value.

With regard to solutions, the report identifies that:

- Ireland and Europe should move towards achieving the health-based WHO air quality guidelines.
- The planned National Clean Air Strategy for Ireland needs to be published and fully implemented.
- Local Authorities must provide more resources to increase air enforcement activities.
- National investment in clean public transport is needed across the country.

In order to apply with European Directives relating to air quality, the EPA manages the National Ambient Air Quality Network and measures the levels of a number of atmospheric pollutants at locations across the country.¹⁵

¹⁵ For more detail on current daily air quality data for the Plan refer to: <https://gis.epa.ie/EPAMaps/>.
CAAS for Sligo County Council

3.8 Material Assets

Other material assets, in addition to those referred to below, covered by the SEA include archaeological and architectural heritage (see Section 3.9) natural resources of economic value, such as water and air (see Sections 3.6 and 3.7).

Public Assets and Infrastructure

Public assets and infrastructure that have the potential to be impacted upon by the Plan, if unmitigated, include; settlements; resources such as public open spaces, parks and recreational areas; public buildings and services; transport and utility infrastructure (electricity, gas, telecommunications, water supply, wastewater infrastructure etc.); forestry; and natural resources that are covered under other topics such as water and soil.

Waste Water

The County is served by various Wastewater Treatment Plants (WWTPs). In unserved areas and outside the main settlements, the main method of sewage disposal is by individual septic tanks and other types of wastewater treatment.

Uisce Éireann has provided information on wastewater treatment capacity, constraints and projects planned within the County to improve the existing network, to assist the Council in the preparation of the new County Development Plan. This information indicates where there may be wastewater treatment capacity available to accommodate growth ("headroom") in areas serviced by a public wastewater treatment plant. Spare treatment capacity is identified as being available in all of these settlements except for: Castlebaldwin WWTP; Rosses Point WWTP; Drumcliffe WWTP (limited capacity); and Easky WWTP (limited capacity). The highest levels of headroom are available at Sligo Town WWTP; Ballysadare WWTP; and Dromore West WWTP.¹⁶ There is currently¹⁷ one WWTP in County Sligo located in Ballymote, listed as a priority area, where improvements are required to resolve urgent environmental issues.

The Uisce Éireann Capital Investment Plan 2020-2024 (CIP) sets out the priorities for investing 5.35 billion euro to deliver the most urgently needed improvements in drinking water quality, leakage reduction, water availability, wastewater compliance, efficiencies and customer service. The CIP funds individual projects such as building new or upgrading existing water and wastewater treatment plants, upgrading existing networks, and national programmes such as the Leakage Reduction Programme, the National Disinfection Programme, the Small Towns and Villages Growth Programme, and the National Certification Authorisation Programme. The 2020-2024 CIP includes six projects in County Sligo, some of which have been completed.¹⁸

Water Supply

There are two main sources of water supplying the Sligo and Environs area, namely Kilsellagh Reservoir and Lough Gill.

Under Section 58 of the Environmental Protection Agency Act 1992, the EPA is required to collect and verify monitoring results for all water supplies in Ireland covered by the European Communities (Drinking Water). The EPA publishes their results in annual reports that are supported by Remedial Action Lists (RALs). The RAL identifies water supplies that are not in compliance with the Regulations mentioned above. The most recent EPA Remedial Action List (Q2 of 2023)¹⁹ does not include any water scheme that supplies the Plan area.

Currently, Uisce Éireann is developing the National Water Resource Plan outlining how to move to a sustainable, secure and reliable public drinking water supply over a 25-year period while safeguarding the environment.

Waste Management

Waste management across the County is guided by the Connacht-Ulster Waste Management Plan 2015-2021. There are three Region Waste Management Plans in Ireland and these will be replaced by a new National Waste Management Plan for a Circular Economy, which will take account of the various measures outlined in *A Waste Action Plan for A Circular Economy - Ireland's National Waste Policy 2020-2025*.

Transport

Transport infrastructure in the County has the potential to support reductions in energy demand from the transport sector, including through electrification of modes.

County Sligo occupies a strategic location on the National Road network with the N15, N16, N17, N59 and N4 traversing parts of the County. The national road network in the County provides an essential means of access from the County to Dublin and other regional centres. There are three railway stations in Sligo that are served by the train line to Dublin – Sligo Mac Diarmada Station (Sligo town), Collooney Station and Ballymote Station. Bus Éireann and a number of other private operators provide bus services into and out of the County.

County Sligo is also served by Sligo Airport (Strandhill) and Ireland West Airport Knock (IWAK) in County Mayo. Harbours, piers and slipways along the Sligo coast provide marine access for the fishing industry and commercial or recreational boat users. Sligo Port is one of seven in the Region, and the most important in the County.

Both regional and local roads provide vital links between the towns and villages to retail, service and employment centres throughout the County and to adjoining counties.

Existing Problems

There are a number of challenges with respect to the provision of water services infrastructure, some of which are summarised above. The provisions of the new County Development Plan will contribute towards protection of the environment with regard to impacts arising from material assets.

3.9 Cultural Heritage

Archaeological Heritage

Archaeological heritage is protected under the National Monuments Acts (1930-2004), Natural Cultural Institutions Act 1997 and the Planning Acts.

To date there has been over 6,500 known Recorded Monuments identified in County Sligo including many monuments in State Care. Each of the Recorded Monuments is encircled by a Zone of Archaeological Notification. Clusters of archaeological heritage are concentrated within and surrounding towns and villages and in lowland rural areas.

Sligo's archaeological heritage includes monuments from the Mesolithic Period (7,000 BC) to the end of the Medieval Period (1,700 AD). These monuments range from megalithic tombs, churches, castles, linear earthwork and ringforts and are found throughout the County. There are also approximately 1,200 industrial heritage sites across the County as identified in the Industrial Archaeology Survey of County Sligo (2005).

Sligo has a number of significant archaeological and historical landscapes, the most notable being the Cuil Irra Peninsula (which includes Knocknarea, Carrowmore and Carns Hill), Carrowkeel and Inishmurray. The cluster of megalithic tombs at Carrowmore represents one of the four major passage tomb cemeteries in Ireland and is the largest such cemetery in the country. Others include Carrowkeel, also in County Sligo, as well as Newgrange and Lough Crew in County Meath. The archaeological landscape of the Cuil Irra (Knocknarea) Peninsula dates from around 4,000 BC, which formed an important ritual centre in the Neolithic period. Queens Maeve's Cairn on Knocknarea is an iconic landscape feature of County Sligo and forms part of Sligo's Neolithic passage tomb tradition.

Architectural Heritage

The term architectural heritage is defined in the Architectural Heritage (National Inventory) and Historic Monuments Act 1999 as meaning all: structures and buildings together with their settings and attendant grounds, fixtures and fittings; groups of structures and buildings; and, sites which are of technical, historical, archaeological, artistic, cultural, scientific, social, or technical interest. Records of Protected Structures are legislated for under Section 12 and Section 51 of the Planning and Development Act 2000, as amended. Protected structures are defined as amended, as structures, or parts of structures that are of special interest from an architectural, historical, archaeological, artistic, cultural, scientific, social or technical point of view.

Similar to the general spatial spread of archaeological heritage, clusters of architectural heritage are indicated within developed urban and suburban locations across the County. There are currently over 700 Protected Structures designated in County Sligo, including churches, houses, bridges, castles, lodges and artisan dwellings. Notable protected structures in County Sligo include: St. Crumnathy's Cathedral; Pollachurry Pier; Coastguard Station; Oyster Island Lighthouse; Sligo Gaol; and Markree Demesne.

An Architectural Conservation Area (ACA) is a place, area, group of structures or townscape, which is of special architectural, historical, archaeological, artistic, cultural, scientific, social or technical interest or contributes to the appreciation of a Protected Structure. An ACA may or may not include Protected Structures. In an ACA, protection is placed on the external appearance of such areas or structures. Five ACAs have been designated in Sligo Town; the town centre of Ballymote has also been designated as an ACA²⁰.

Existing Problems

The context of archaeological and architectural heritage has changed over time within County Sligo, however no existing conflicts with legislative objectives governing archaeological and architectural heritage have been identified.

3.10 Landscape

County Sligo is characterised by a variety of mainly rural landscapes, including rough pasture predominantly in the mountains, hills, and peat bogs. On the east, the boundary with County Leitrim runs southward through the coastal lowland to the limestone Dartry Mountains, including Benbulbin Mountain (noted as one of Ireland's most distinctive natural landmarks). The County boundary crosses Glencar and an area of plateau to Lough Gill with the island of Innisfree. West of the Collooney Gap, the ridge forms the Ox Mountains and a peat moorland and, to the north, an area of continuously farmed lowland, from the mouth of the River Moy to the Leitrim border. The coastal areas of the County include Sligo Bay with three long estuaries, leading to the towns of Drumcliff, Sligo, and Ballysadare, which receive the waters of the Rivers Drumcliff, Garravogue, and Owenmore.

A landscape characterisation and appraisal study for Sligo County Council was completed in 1996. This resulted in a map that was the basis for the Landscape Characterisation Map, which classified the areas in the County according to its visual sensitivity and capacity to absorb new development without compromising the scenic character of certain areas. It identified the following:

- Normal Rural Landscapes (generally have the capacity to absorb a wide range of new development forms);
- Sensitive Rural Landscapes (low capacity to absorb new development); and
- Visually Vulnerable Areas (extremely low capacity to absorb new development) and Scenic Routes.

Areas, which are of exceptional value and of international importance, such as the Cuil Irra Peninsula, Carrowkeel and Inishmurray and are highly sensitive to development.

3.11 Strategic Environmental Objectives

Strategic Environmental Objectives (SEOs) are methodological measures developed from policies that generally govern environmental protection objectives established at international, Community or Member State level e.g. the environmental protection objectives of various European Directives that have been transposed into Irish law and that are required to be implemented. The SEOs are set out under a range of topics and are used as standards against which the provisions of the Draft Plan, the alternatives and the Proposed Material Alterations are evaluated in order to help identify which provisions would be likely to result in significant environmental effects and where such effects would be likely to occur, if - in the case of adverse effects - unmitigated.

Table 3.1 Strategic Environmental Objectives

Environmental Component	SEO Code	Strategic Environmental Objectives
Biodiversity, Flora and Fauna	BFF	<ul style="list-style-type: none"> To preserve, protect, maintain and, where appropriate, enhance the terrestrial, aquatic and soil biodiversity, particularly EU designated sites and protected species Ensure no adverse effects on the integrity of any European site, with regard to its qualifying interests, associated conservation status, structure and function Safeguard national, regional and local designated sites and supporting features which function as stepping stones for migration, dispersal and genetic exchange of wild species Enhance biodiversity in line with the National Biodiversity Strategy and its targets To protect, maintain and conserve the County's natural capital
Population and Human Health	PHH	<ul style="list-style-type: none"> Promote economic growth to encourage retention of working age population and funding of sustainable development and environmental protection and management Ensure that existing population and planned growth is matched with the required public infrastructure and the required services Safeguard the County's citizens from environment-related pressures and risks to health and well-being
Soil (and Land)	S	<ul style="list-style-type: none"> Protect soils against pollution, and prevent degradation of the soil resource Promote the sustainable use of infill and brownfield sites over the use of greenfield within the County Safeguard areas of prime agricultural land and designated geological sites
Water	W	<ul style="list-style-type: none"> Ensure that the status of water bodies is protected, maintained and improved in line with the requirements of the Water Framework Directive Ensure water resources are sustainably managed to deliver proposed regional and County growth targets in the context of existing and projected water supply and wastewater capacity constraints ensuring the protection of receiving environments Avoid inappropriate zoning and development in areas at risk of flooding and areas that are vulnerable to current and future erosion, including coastal areas Integrate sustainable water management solutions (such as SuDS, porous surfacing and green roofs) into development proposals
Material Assets	MA	<ul style="list-style-type: none"> Optimise existing infrastructure and provide new infrastructure to match population distribution proposals in the County Ensure access to affordable, reliable, sustainable and modern energy for all which encourages a broad energy generation mix to ensure security of supply – wind, solar, hydro, biomass, energy from waste and traditional fossil fuels Promote the circular economy, reduce waste, and increase energy efficiencies Ensure there is adequate sewerage and drainage infrastructure in place to support new development Reduce the energy demand from the transport sector and support moves to electrification of road and rail transport modes Encourage the transition to a zero-carbon economy by facilitating the development of a grid infrastructure to support renewables and international connectivity. Reduce the average energy consumption per capita including promoting energy efficient buildings, retrofitting, smart- buildings, cities and grids
Air	A	<ul style="list-style-type: none"> To avoid, prevent or reduce harmful effects on human health and the environment as a whole resulting from emissions to air from all sectors with particular reference to emissions from transport, residential heating, industry and agriculture Maintain and promote continuing improvement in air quality through the reduction of emissions and promotion of renewable energy and energy efficiency Promote continuing improvement in air quality Reduction of emissions of sulphur dioxide, nitrogen oxides, volatile organic compounds, ammonia and fine particulate matter which are responsible for acidification, eutrophication and ground-level ozone pollution Meet Air Quality Directive standards for the protection of human health — Air Quality Directive Significantly decrease noise pollution by 2020 and move closer to WHO recommended levels
Climatic Factors	C	<ul style="list-style-type: none"> To minimise emissions of greenhouse gasses Integrate sustainable design solutions into the County's infrastructure (e.g. energy efficient buildings; green infrastructure) Contribute towards the reduction of greenhouse gas emissions in line with national targets Promote development resilient to the effects of climate change Promote the use of renewable energy, energy efficient development and increased use of public transport
Cultural Heritage	CH	<ul style="list-style-type: none"> Protect places, features, buildings and landscapes of cultural, archaeological or architectural heritage
Landscape	L	<ul style="list-style-type: none"> To implement the Plan's framework for identification, assessment, protection, management and planning of landscapes having regard to the European Landscape Convention

Section 4 Alternatives

4.1 Introduction

The SEA Directive requires that reasonable alternatives (taking into account the objectives and the geographical scope of the plan or programme) are identified, described and evaluated for their likely significant effects on the environment. Available reasonable alternatives for the County Development Plan are identified in this section which also summarises the environmental assessment provided in the main SEA Environmental Report. The description and assessment of the alternatives summarised for the Plan below are not affected by the Proposed Material Alterations.

4.2 Limitations in Available Alternatives

The Plan is required to be prepared by the Planning and Development Act 2000 (as amended), which specifies various types of objectives that must be provided for by the Plan. The alternatives available for the Plan are limited by the provisions of higher-level planning objectives, including those of the National Planning Framework (NPF) and the Regional Spatial and Economic Strategy (RSES) for the Northern and Western Region. These documents set out various requirements for the content of the Plan including on topics such as settlement typology, land use zoning and the sustainable development of rural areas. In addition, the Development Plan Guidelines (2022) contain a detailed methodology (in Section 4 and Appendix A) for implementing the NPF requirement regarding Infrastructural Assessment (IA) of existing and proposed zoned lands. The Settlement Capacity Audit (SCA), based on the IA, must be the basis of Core Strategy formulations and corresponding zoning decisions for residential development.

4.3 Type 1: Alternatives for the Settlement Hierarchy

Alternative A would retain the Support Towns designations for Ballymote, Enniscrone and Tobercurry, despite relatively low population growth in these towns, compared to Satellite Villages.

Ballymote, Enniscrone and Tobercurry are urban centres with multiple functions, capable of providing local employment and a good variety of services not just to their residents, but also to rural communities in their large rural hinterlands. These towns, located in the south, south-west and extreme west of the County, are closer and are more accessible to large numbers of rural dwellers than Sligo Town.

Consolidation of these towns, supporting their economic development and improving their social/community infrastructure would help create additional local jobs and services, thereby reducing their residents' need to commute to Sligo Town for work, school, shopping etc.

Alternative B would retain the Support Town designation for Tobercurry and instead designate Ballysadare, Collooney and Strandhill Support Towns, since their population is higher than that of Ballymote and Enniscrone.

Ballysadare, Collooney and Strandhill have seen substantial growth between 2002 and 2022, doubling or even nearly tripling their population – 104%, 190% and 97% respectively.

However, they continue to lack jobs, services and community infrastructure, and function largely as “dormitories” for people who work elsewhere, mostly in Sligo Town. While their designation as Support Towns might help in the provision of suitable community and recreational facilities, it would not be likely to stimulate local jobs creation, given the proximity and competition of Sligo Town.

There are also physical constraints to the further development of these settlements, especially Ballysadare and Strandhill, which are adjoining highly sensitive European sites.

Selected Type 1 Alternative for the Plan: Alternative A.

4.4 Type 2: Alternatives for Population Allocations

Alternative A comprises "Support "Towns-only" growth", i.e. allocate significant proportions of future housing and corresponding additional population to Sligo Town/Regional Growth Centre and to the Support Towns (Ballymote, Enniscrone and Tobercurry), and strictly limit growth in Satellite Villages and lower levels.

Under this option, future population and housing would be directed into Sligo Town, Ballymote, Enniscrone and Tobercurry, where employment and services can be provided more efficiently.

The existing residential and mixed-use zoning in Ballymote and Enniscrone would be largely retained. Up to 20-23 ha would be zoned in Tobercurry (as per the Draft LAP 2015). All zoning would be subject to infrastructural assessment.

In order to ensure that sufficient housing land is available in the four towns, no sites would be designated for residential development (or mix of uses including residential) outside these urban areas.

Undeveloped lands previously zoned for residential and mixed uses in serviced villages would be zoned "RV" (Rural Village) instead. The flexible "RV" (Rural Village) zoning objective would allow for local housing need to be catered for in villages with adequate service infrastructure, while unserviced settlements would not be zoned.

Alternative B comprises "Driving growth through the Sligo Regional Growth Centre", i.e. allocate the majority of future housing and corresponding additional population to Sligo Town, and a small proportion to the Satellite Villages located within the RGC Strategic Plan Area (as specified in the NWRA RSES).

This approach would be the most closely aligned with the RSES, which promotes development in the Sligo Regional Growth Centre and requires a Local Transport Plan for the Sligo RGC Strategic Plan Area. Population and housing growth would be promoted in the area where land-use can be best integrated with public transport and active travel.

While the focus remains on Sligo RGC, there would be reasonable population and housing allocations for the three Support Towns (Ballymote, Enniscrone, Tobercurry), recognising their roles in the Settlement Strategy.

Similar to Alternative A, the flexible "RV" (Rural Village) zoning objective would allow for locally-needed housing and minimal population growth in other villages with adequate service infrastructure, while unserviced settlements would not be supported for growth.

Selected Type 2 Alternative for the Plan: Alternative B.

4.5 Type 3: Alternatives for Rural Settlements

Alternative A would include specific objectives for serviced villages to support their economic, social and community infrastructure, thereby offering a more attractive alternative to one-off housing in the open countryside.

Objectives would be provided in Village Plans for small settlements with adequate wastewater treatment system but no specific housing or population allocations.

Objectives would relate to the design of any new village-centre development, the provision or improvement of local infrastructure (e.g. school extensions, parks, walkways etc.), and the protection of significant natural and built heritage.

A flexible RV ("Rural Village") zoning objective would allow for the construction of locally-needed houses, thereby providing an alternative to the construction of isolated rural dwellings served by on-site wastewater treatment systems.

Alternative B would designate only development limits for villages, without any provisions targeting economic, social and community infrastructure.

The purpose of designating development limits would be to encourage the clustering of one-off houses in compact areas, to take advantage of existing wastewater treatment infrastructure or to facilitate their future servicing by Uisce Éireann. However, this alternative would not include specific objectives to support the villages in developing community and recreational facilities, or to protect the natural/built heritage and amenities. As a consequence, these villages would not become more attractive as places to live, and would not be seen as viable alternatives to the open countryside in terms of building individual houses.

Selected Type 3 Alternative for the Plan: Alternative A.

4.6 Type 4: Alternatives for Residential Densities

Alternative A would apply standard residential densities to lands zoned for housing across the entire County, set at the levels recommended in Chapters 5 and 6 of the Sustainable Residential Development Guidelines (2009) for larger towns, smaller towns and villages.

A key objective of the NPF and RSES is to promote the compact growth of towns and villages by increasing the density of development in existing built-up areas and in new developments, particularly in town centres. This would lead to more efficient use of existing physical infrastructure and services, thereby reducing the need for motorised travel. It is also likely to decrease the amount of open space and residential amenities available to local people.

Alternative B would involve adopting a tailored approach to residential development by specifying locally appropriate residential densities, to ensure that new development responds to the character, scale and setting of the town or village (as specified in the Circular Letter NRUP 02/2021).

Adapting the scale, design and layout of housing in towns and villages would ensure that suburban or high-density urban approaches are not applied to small villages or to settlements where the natural and built heritage would be negatively affected by dense development.

Reducing the attractiveness of small towns and villages by imposing out-of-character, high-density development is likely to stimulate more house-building in the open countryside.

Having regard to the NPF, the Sustainable Residential Development Guidelines (2009) and subsequent Circular Letter (2021), the Planning Authority would determine the appropriate average residential density in each town and village subject to land-use zoning.

Selected Type 4 Alternative for the Plan: Alternative B.

4.7 Type 5: Alternatives for Land-Use Zoning (residential and mixed uses, including residential)

The provisions for land-use zoning introduced by the NPF and Development Plan Guidelines 2022, particularly for residential and mixed uses, including residential, have severely limited the options previously available to the Planning Authority when preparing town and village plans.

Fixed housing targets (calculated in accordance with the Housing Supply Targets Methodology) and increased density requirements indicate clearly that the amount of land currently (2023) zoned for housing and mixed uses needs to be substantially reduced. Two realistic alternatives have been examined in this regard.

Alternative A would retain unchanged the extent of land zoned for residential and mixed uses including residential, but introduce a phasing policy, whereby only a specified proportion/area of each zoned site can be developed during the Plan period.

Under this approach, lands which have been zoned for residential and mixed uses for more than two iterations of the Development Plan (2011 to present), and which could not be developed because of the economic crisis, Covid-19 pandemic, recent steep rise in energy prices etc., would be given an opportunity to fulfil their potential for development by 2030.

Alternative B would zone lands for residential and mixed uses based on a scoring system designed e.g., to promote the sequential and compact growth of settlements (using the methodology recommended in the Development Plan Guidelines 2022).

This approach would entail an Infrastructural Assessment (IA) and a Settlement Capacity Audit (SCA) for each town or village where land is proposed to be zoned.

The IA would consider the availability of transport infrastructure (roads, footpaths, cycleways) and service infrastructure (watermains, foul sewers, surface drainage systems) that would allow the development of lands immediately or during the Plan period.

“Tier 1” (fully serviced) sites resulting from the IA would be subject to a further assessment as part of the SCA. This further evaluation would assign numerical scores to sites, based on criteria grouped under two main headings:

- “Spatially sequential” test – where the main consideration was proximity to the town/village centre (defined as the walking distance to a specified landmark); and
- Availability of social/community/recreational infrastructure in the surrounding area (e.g. primary school, grocery shop, pharmacy, public open space).

Further points would be awarded to sites where planning permission had been previously granted or a Local Authority housing scheme had been approved (“Part 8” development).

In Sligo Town, additional points would also be given to sites that are highlighted in the RSES for their high potential to contribute to the development of the Regional Growth Centre.

Selected Type 5 Alternative for the Plan: Alternative B.

4.8 Reasons for Choosing the Selected Alternatives in light of Other Reasonable Alternatives Considered

Selected alternatives for the Plan from each of the tiers of alternatives that emerged from the planning/SEA process are summarised above.

These alternatives have been incorporated into the Plan having regard to both:

1. The environmental effects which are identified by the SEA and are detailed above; and
2. Planning - including social and economic - effects that also were considered.

Section 5 Summary of Effects arising from Plan

A summary of the likely significant environmental effects arising from the Proposed Material Alterations that were subject to SEA is provided on Table 5.1 below.

Appropriate Assessment (AA) Screening and Stage 2 AA are being undertaken alongside the preparation of the Plan, including the Proposed Material Alterations. The requirement for AA is provided under the EU Habitats Directive. The emerging conclusion of the AA is that the Plan will not affect the integrity of the European Sites, alone or in combination with other plans or projects²¹. The preparation of the Plan, SEA and AA has taken place concurrently and the findings of the AA have informed the SEA. The Proposed Material Alterations are accompanied by an AA Natura Impact Report, which has informed the SEA Environmental Report, which this Non-Technical Summary accompanies.

Strategic Flood Risk Assessment (SFRA) is being undertaken to inform the preparation of the Draft Plan and the Proposed Material Alterations. The SFRA process has informed this report and an SFRA Addendum is included at Appendix IV to the SEA Environmental Report.

Table 5.1 Summary of Effects arising from Proposed Material Alterations that were subject to SEA

Proposed Material Alterations No's. ²²	Commentary
Proposed Amendments No's: PA-50 PAZ-9 PAZ-10 PAZ-11 PAZ-12 PAZ-13 PAZ-14 PAZ-15 PAZ-16 PAZ-21 PAZ-22 PAZ-23 PAZ-31 PAZ-32 PAZ-33 PAZ-34 PAZ-35 PAZ-40 PAZ-41 PAZ-42 PAZ-43 PAZ-44 PAZ-45 PAZ-46 PAZ-55 PAZ-56 PAZ-57 PAZ-58 PAZ-60 PAZ-62 PAZ-64 PAZ-66 PAZ-68 PAZ-73 PAZ-76 PAZ-81 PAZ-84 PAZ-85	<p>As has already been identified in the SEA Environmental Report that was placed on public display alongside the Draft Plan:</p> <ul style="list-style-type: none"> Environmental considerations were integrated into the Draft Plan's zoning through an interdisciplinary approach. Zoning has been applied in a way that primarily seeks to achieve sustainable and compact growth, taking into account the various requirements set out in the higher-level NPF and Northern and Western RSES. The detailed Plan preparation process undertaken by the Planning Department combined with specialist input seeks to facilitate zoning that will help to avoid inappropriate development being permitted in areas of elevated sensitivity, such as in areas at risk of flooding or ecological sensitivity. Various provisions have been integrated into the Plan that provide for flood risk management and ecological protection and management at project level. Also considered were environmental sensitivities relating to ecology, cultural heritage, landscape and water, as well as the overlay mapping of environmental sensitivities.. <p>These Proposed Amendments would not provide the most evidence-based framework for development and have the potential to undermine sustainable development and proper planning - with potential for associated unnecessary adverse environmental effects on various environmental components, including:</p> <ul style="list-style-type: none"> Conflict with efforts to maximise sustainable compact growth, sustainable mobility and a transition to a low carbon and climate resilient society (residual effects would occur); Adverse impacts upon carbon emission reduction targets in line with local, national and European environmental objectives (residual effects would occur); Adverse impacts upon the economic viability of providing for public assets and infrastructure (residual effects would occur); Effects on ecology, ecological connectivity and non-designated habitats and species (residual effects would occur); Loss of an extent of soil function arising from the replacement of semi-natural land covers with artificial surfaces (residual effects would occur); Occurrence of visual impacts (residual effects would occur); and Increased loadings on water bodies. <p>In addition, part of the undeveloped lands proposed to be zoned by the following Proposed Material Alterations overlap with Flood Zones A/B, would fail the Justification Test under the Flood Risk Management Ministerial Guidelines – as detailed in the updated SFRA at Appendix IV:</p> <ul style="list-style-type: none"> PAZ-15 PAZ-23 PAZ-34 PAZ-62 PAZ-76 <p>However, the following text under "Limitations related to Flood Risk Zones" at Chapter 10.5.4 "Land-use Zoning Matrix" would ensure that development is limited in these areas:</p> <p><i>"The limitation described in this note applies to a relatively small number of instances where Flood Risk Zones A and B overlap with certain land-use zoning objectives, including Open Space (OS) and Green Belt (GB). Uses under all zoning objectives (apart from where the Justification Test outlined in the Flood Risk Management Plan has been passed or where the uses comprise minor development in existing developed areas, as outlined in Section 5.28 of the Guidelines as amended by Circular PL 2/2014) shall be limited to water-compatible uses in Flood Zone A, and less vulnerable or water-compatible uses in Flood Zone B. Detailed, site-specific Flood Risk Assessment will be required in these areas. This limitation shall take primacy over any other provision relating to these land use zoning objectives. The lands that have passed the Justification Test are listed in Appendix 1 of the Strategic Flood Risk Assessment that accompanies the Development Plan."</i></p> <p>Furthermore, as the following Proposed Material Alterations could potentially impact upon the protection of European sites, Stage 2 AA is required. Consequently, SEA was advised as prudent. However, the Stage 2 AA, the findings of which are provided in the accompanying AA Natura Impact Report, found that the mitigation included in the Draft Plan and associated Proposed Material Alterations would ensure the appropriate protection of European sites.</p> <ul style="list-style-type: none"> PAZ-55 PAZ-15 PAZ-16 PAZ-34

²¹ Except as provided for in Article 6(4) of the Habitats Directive, viz. There must be: (a) no alternative solution available, (b) imperative reasons of overriding public interest for the plan to proceed; and (c) adequate compensatory measures in place.

²² For detail on Proposed Material Alterations please refer to Proposed Material Alterations document.

SEA Environmental Report Appendix V: Non-Technical Summary

Proposed Material Alterations No's. ²²	Commentary
Proposed Amendments No's: PA-115 PA-130 PA-135 PA-153 PA-194 PA-199	As these Proposed Material Alterations could potentially impact upon the protection of European sites, Stage 2 AA is required. Consequently, SEA was advised as prudent. The Stage 2 AA, the findings of which are provided in the accompanying AA Natura Impact Report, found that the mitigation included in the Draft Plan and associated Proposed Material Alterations would ensure the appropriate protection of European sites.
Proposed Amendments No's: PAZ-18 PAZ-19 PAZ-63 PAZ-79 PAZ-80	Part of the undeveloped lands proposed to be zoned by these Proposed Material Alterations overlap with Flood Zones A/B, would fail the Justification Test under the Flood Risk Management Ministerial Guidelines – as detailed in the updated SFRA at Appendix IV. However, the following text under "Limitations related to Flood Risk Zones" at Chapter 10.5.4 "Land-use Zoning Matrix" would ensure that development is limited in these areas: <i>"The limitation described in this note applies to a relatively small number of instances where Flood Risk Zones A and B overlap with certain land-use zoning objectives, including Open Space (OS) and Green Belt (GB). Uses under all zoning objectives (apart from where the Justification Test outlined in the Flood Risk Management Plan has been passed or where the uses comprise minor development in existing developed areas, as outlined in Section 5.28 of the Guidelines as amended by Circular PL 2/2014) shall be limited to water-compatible uses in Flood Zone A, and less vulnerable or water-compatible uses in Flood Zone B. Detailed, site-specific Flood Risk Assessment will be required in these areas. This limitation shall take primacy over any other provision relating to these land use zoning objectives. The lands that have passed the Justification Test are listed in Appendix 1 of the Strategic Flood Risk Assessment that accompanies the Development Plan."</i>

Section 6 Mitigation and Monitoring Measures

6.1 Mitigation

Mitigation measures are measures envisaged to prevent, reduce and, as fully as possible, offset any significant adverse impacts on the environment of implementing the Plan. These measures also apply to Proposed Material Alterations. Various environmental sensitivities and issues have been communicated to the Council through the SEA, Appropriate Assessment (AA) and Strategic Flood Risk Assessment (SFRA) processes.

Mitigation as part of the Draft Plan preparation/SEA process was achieved through the:

- Strategic work undertaken by the Council to ensure contribution towards environmental protection and sustainable development²³;
- Considering alternatives for the Plan, to which the Proposed Material Alterations relate²⁴;
- Integration of environmental considerations into zoning provisions of the Plan, to which the Proposed Material Alterations relate²⁵; and
- Integration of individual SEA, AA and SFRA provisions into the text of the Plan, to which the Proposed Material Alterations relate.

6.2 Monitoring

The SEA Directive requires that the significant environmental effects of the implementation of plans and programmes are monitored. Monitoring is based around indicators that allow quantitative measures of trends and progress over time relating to the Strategic Environmental Objectives identified at Table 3.1 and used in the evaluation. Monitoring indicators, targets, sources and remedial action is provided at Table 6.1 overleaf.

²³ Far in advance of both the submission of the Chief Executive's Draft Plan to the Elected Members for approval and the placing of the Draft Plan on public display, Sligo County Council undertook various research in order to inform the preparation of the Plan. The findings of this strategic work have been integrated into the Plan and will contribute towards both environmental protection and management and sustainable development within the County. Strategic work undertaken by the Council includes background work in relation to Plan Strategies and other provisions, including those relating to:

- Climate Action;
- Core Strategy;
- Sligo Growth Centre;
- Settlement Strategy;
- Housing Strategy;
- Economic Strategy;
- Retail Strategy; and
- Transport Strategy.

²⁴ Although strategic alternatives in relation to the content of the Plan were significantly limited for the Plan (see Section 4), as part of the Plan preparation/SEA process, the Planning Department considered a number of alternatives for the Draft Plan, to which the Proposed Material Alterations relate. These alternatives were assessed by the SEA process and the findings of this assessment informed the selection of preferred alternatives, facilitating an informed choice with respect to the type of Plan that was prepared and placed on public display.

²⁵ Environmental considerations were integrated into the Draft Plan's zoning through an interdisciplinary approach. Zoning has been applied in a way that primarily seeks to achieve sustainable and compact growth, taking into account the various requirements set out in the higher-level NPF and Northern and Western RSES. The detailed Plan preparation process undertaken by the Planning Department combined with specialist input seeks to facilitate zoning that will help to avoid inappropriate development being permitted in areas of elevated sensitivity, such as in areas at risk of flooding or ecological sensitivity. Various provisions have been integrated into the Plan that provide for flood risk management and ecological protection and management at project level. Also considered were environmental sensitivities relating to ecology, cultural heritage, landscape and water, as well as the overlay mapping of environmental sensitivities.

Table 6.1 Indicators, Targets, Sources and Remedial Action

Environmental Component	Indicators	Targets	Sources	Remedial Action
Biodiversity, Flora and Fauna	<ul style="list-style-type: none"> Condition of European sites 	<ul style="list-style-type: none"> Require all local level land use plans to include ecosystem services and green/blue infrastructure provisions in their land use plans and as a minimum, to have regard to the required targets in relation to the conservation of European sites, other nature conservation sites, ecological networks, and protected species Implement and review, as relevant, County Sligo Local Biodiversity Action Plan 	<ul style="list-style-type: none"> DHLGH report of the implementation of the measures contained in the Habitats Directive - as required by Article 17 of the Directive (every 6 years)²⁶ DHLGH National Birds Directive Monitoring Report for the under Article 12 (every 3 years)²⁷ Consultations with the NPWS²⁸ 	<ul style="list-style-type: none"> Where condition of European sites is found to be deteriorating this will be investigated with the Regional Assembly and the DHLGH to establish if the pressures are related to Plan actions / activities. A tailored response will be developed in consultation with these stakeholders in such a circumstance.
	<ul style="list-style-type: none"> Number of spatial plans that have included ecosystem services content, mapping and policy to protect ecosystem services when their relevant plans are either revised or drafted 	<ul style="list-style-type: none"> Require all local level land use plans to include ecosystem services and green/blue infrastructure provisions in their land use plans and as a minimum, to have regard to the required targets in relation to the conservation of European sites, other nature conservation sites, ecological networks, and protected species Implement and review, as relevant, County Sligo Local Biodiversity Action Plan 	<ul style="list-style-type: none"> Internal review of local land use plans 	<ul style="list-style-type: none"> Review internal systems
	<ul style="list-style-type: none"> SEAs and AAs as relevant for new Council policies, plans, programmes etc. 	<ul style="list-style-type: none"> Screen for and undertake SEA and AA as relevant for new Council policies, plans, programmes etc. 	<ul style="list-style-type: none"> Internal monitoring of preparation of local land use plans 	<ul style="list-style-type: none"> Review internal systems
	<ul style="list-style-type: none"> Status of water quality in the County's water bodies 	<ul style="list-style-type: none"> Included under Water below 	<ul style="list-style-type: none"> Included under Water below 	<ul style="list-style-type: none"> Included under Water below
